

ALUZINA

DESIGN, PRODUCTION & INSTALLATION FLOW

Base system for automating interior spaces, furniture and lighting projects

PURPOSE

Transform ALUZINA's real working process into a clear, measurable and automatable digital workflow, without replacing the studio's creative judgment.

SPACE + LIGHT + EXPERIENCE

Overview

The client experience should remain simple; ALUZINA's internal operating system should be detailed.

CLIENT-FACING FLOW

01 Tell us what you want to create	02 Let us get to know your space	03 Receive the proposal	04 Approve your design
05 We design and develop	06 We bring it to life	07 We install	08 We deliver

ALUZINA INTERNAL FLOW

Contact → Requirement → Site Visit & Survey → Quotation → On-site Validation → Approval → Drawings & 3D → Production → Installation → Final Details → Closeout & Payment

System principle

Each stage has an input, an owner, a deliverable, a status and an approval. When a required condition is met, the system automatically activates the next stage.

Detailed Flow

Base operational process for space, furniture and lighting projects.

01 CLIENT CONTACT / MEETING

The project begins through a meeting, chat, phone call or website form. Client information, project type and general need are identified.

Automation: Create the client and project record, assign a project code, register the incoming channel and notify the team.

02 UNDERSTANDING THE REQUIREMENT

Define what the client needs, what they want to transform, where the element will be located, functional needs, aesthetics, approximate budget and timing.

Automation: Generate a dynamic brief according to project type and flag missing information.

03 SITE VISIT + SURVEY

Take photographs and measurements, and review existing conditions, access, utilities and site restrictions.

Automation: Site-visit checklist, photo upload, measurements and technical conditions saved to the project record.

04 QUOTATION

Using the initial information, define the value of the service or element and the contracted scope.

Automation: Generate the quotation, send it, and track version and status: sent / pending / accepted.

05 ON-SITE VALIDATION

Show the client the real scale and dimensions of the element or intervention within the space using tape, layout markings or physical references. Validate size, location, proportion and functionality.

Automation: Record observations, photographs and requested changes; create a validation version.

06 APPROVAL

The client approves dimensions, location, scope, value and initial concept. This approval unlocks the development phase.

Automation: APPROVE PROJECT button, date/user/version stamp, and lock the approved version.

Detailed Flow

From technical development to project closeout.

07 DRAWINGS + 3D MODEL

Design development: drawings, dimensions, materials, details, 3D model, and visualizations or renders when required.

Automation: Version control and a second approval: APPROVE DESIGN FOR PRODUCTION.

08 PRODUCTION / CONSTRUCTION

Generate the production or execution order with suppliers, materials, quantities, dates, costs and tracking.

Automation: Automatic statuses: To Start → In Production → Quality Control → Completed.

09 INSTALLATION

Schedule the date, team, transportation, tools, site conditions, electrical installation when applicable, and assembly.

Automation: Installation checklist, calendar, responsible parties and before/after photo record.

10 FINAL DETAILS & REVIEW

Complete adjustments, touch-ups, leveling, cleaning, hardware review, finishes, lighting and functional testing.

Automation: ALUZINA delivery checklist and punch list with owner and closeout date.

11 CLOSEOUT + PAYMENT

Record the outstanding balance, issue invoice or payment request, close the project, archive final photographs and request a testimonial.

Automation: Balance reminder, administrative closeout and automatic creation of a case study/portfolio entry.

Application by Project Line

The same core structure adapts to ALUZINA's three areas of creation.

INTERIOR SPACES

Client → requirement → site visit → survey → quotation → concept → validation → approval → drawings/3D → construction → installation → final details → payment.

FURNITURE

Client → requirement → measurements → quotation → scale validation → approval → drawings/3D → fabrication → installation → final details → payment.

LIGHTING FIXTURES

Client → requirement → lighting conditions and measurements → quotation → scale test → approval → technical design/3D → prototype/production → installation → calibration → payment.

Approval Rules

- Before production, every proposal must have a client-approved version.
- Every change after approval creates a new version and may generate additional cost or lead time.
- Approval must store date, responsible person, version and supporting evidence.
- Production cannot begin if measurements, drawings, materials or final approval are missing.

Website Automation

The website works as the client portal and as the trigger for ALUZINA's internal operating system.

WHEN THIS HAPPENS	THE SYSTEM DOES THIS
Form received	Create client + project + brief + folder + project code.
Quotation accepted	Request deposit and activate survey/design phase.
Payment confirmed	Unlock the next phase and notify the responsible person.
Site visit completed	Request upload of photos, measurements and technical checklist.
Validation completed	Send summary to the client and request approval.
Design approved	Generate the production package and lock the approved version.
Production started	Activate supplier, date and cost tracking.
Production completed	Schedule installation.
Installation completed	Activate final-details and closeout checklist.
Project closed	Request final balance, review, photographs and case study.

Project Statuses

New → Brief → Site Visit → Quotation → Approved → Design → Production → Installation → Final Details → Closeout → Completed

AUTOMATION GOAL

Eliminate repetitive tasks, centralize information and make the status of every project visible. Creative judgment, composition, experience, materiality and lighting remain under ALUZINA's direction.
